PROFILE

I'm a Full-Stack Engineer who builds products end-to-end — APIs and databases on the backend, responsive interfaces on the frontend, and smart contracts on-chain.

Over 4 years across 4 companies I've shipped recruitment platforms, real-time voting systems, SocialFi apps and internal business tools. Most of my time goes to backend architecture: service boundaries, event-driven flows with Kafka, caching, and search.

Currently at SotaTek JSC, building the SotaAgents AI platform and delivering outsourcing projects for Japanese enterprises.

EXPERIENCE

Software Engineer · SotaTek JSC

04/2026 – Present

- Building SotaAgents, the company's enterprise AI workspace: MCP server, credit metering, app-platform permissions and admin console features.
- Delivering software outsourcing solutions for Japanese enterprises.
- Developing and managing outsourcing projects against strict client quality standards.

`NestJS` `MongoDB` `PostgreSQL` `Redis` `BullMQ` `MCP` `Vercel AI SDK` `Docker` `AWS` `React.js` `Next.js`

Backend Engineer · IGB Soft JSC

04/2025 – 04/2026

- Migrated legacy PHP systems to a microservices architecture with NestJS, Kafka and Redis.
- Optimized API performance and system stability for a large-scale recruitment platform.

`NestJS` `PostgreSQL` `Kafka` `Redis Cluster` `Elasticsearch` `Docker`

Fullstack & Blockchain Developer · DATH Solutions JSC

07/2024 – 04/2025

- Developed SocialFi platforms and Telegram MiniApps with real-time features.
- Built and deployed smart contracts on BNB Chain and Aptos/Movement.

`NestJS` `Next.js` `Solidity` `Web3` `PostgreSQL` `AWS` `GitHub Actions`

Backend Engineer · Bytesoft Vietnam JSC

06/2022 – 07/2024

- Developed business operation software (BOffice), focused on recruitment and timekeeping modules.
- Implemented REST APIs, GraphQL and WebSockets for international markets.

`NestJS` `React.js` `MySQL` `MongoDB` `Docker` `CI/CD`

PROJECTS

SotaAgents · Enterprise AI workspace

2026 – Present

sotaagents.ai

- Built an MCP server exposing Knowledge Base and core tool packs to external agents, with per-tool pricing, credit metering and admin price overrides.
- Extended the credit ledger to record the answering model, workspace and document stats per turn, with backfill, CSV export and a detail drawer in the console.
- Hardened the app platform: actor identity claims gated behind explicit manifest grants, and manifest validation against the Core tool catalog.
- Implemented organization deletion as a cascading purge across workspaces, conversations, MCP servers and billing, with audit logging and an inventory completeness test.
- Added role-based access to the Knowledge Base app UI: admins write, members read, with 403 handling on every write surface.

`NestJS (Fastify)` `MongoDB` `Redis` `BullMQ` `Qdrant` `Vercel AI SDK` `MCP` `React` `TanStack Query` `Zustand` `Zod` `AWS S3`

CareerViet · Recruitment platform — 04/2025 – 04/2026

careerviet.vn

- Designed and led the migration of a PHP monolith to NestJS microservices, improving service isolation and independent deployability.
- Implemented event-driven architecture with Kafka + Saga pattern to keep distributed transactions consistent across PostgreSQL, MongoDB and Oracle PL/SQL.
- Moved search from Solr to Elasticsearch with real-time multi-database synchronization.
- Set up Redis Cluster for high-availability caching and Kong Gateway for centralized API traffic.

`NestJS` `Microservices` `Kafka (Saga)` `Redis Cluster` `Elasticsearch` `PostgreSQL` `MongoDB` `Oracle PL/SQL` `Kong Gateway` `Docker`

LLM Gateway Proxy · Open-source LLM gateway — 09/2026 – Present

github.com/hoainambeco/llm-gateway-proxy

- Turned an existing open-source proxy core into a standalone NestJS + Fastify service, deployable on a VPS or in Docker.
- Added GitHub Copilot, OpenAI, Claude and ChatGPT upstreams, regex routing rules that set a failover pipeline per model, and model discovery across providers.
- Implemented the account pool behind those routes — round-robin, sticky and cache-first selection, automatic OAuth token refresh, 429 cooldown and cross-account failover — plus in-memory thought-signature recovery for reasoning models.
- Built API key management on SQLite and TypeORM: hashed keys, roles, an in-memory validation cache and migrations that run on boot.
- Built the embedded admin dashboard (React, Vite, Tailwind, EN/VI) for accounts and quota, routing, the model catalog, API keys and traffic logs.
- Hardened auth, OAuth and outbound requests; CI type-checks, builds, validates migrations and publishes a Docker image to GHCR.

`NestJS` `Fastify` `TypeScript` `TypeORM` `SQLite` `WebSockets` `Zod` `React` `Vite` `TailwindCSS` `Docker` `GitHub Actions`

Acanet · SocialFi & Telegram MiniApp — 07/2024 – 04/2025

🏆 Runner-up — Movement Olympus Hackathon

- Built the SocialFi layer — member profiles, posts, follow graph and an activity feed — on NestJS, Next.js and PostgreSQL, with OpenSearch powering feed search and discovery.
- Shipped the Telegram Mini App end to end: initData signature verification, wallet connect, a quest engine (follow, join, daily check-in, learn-to-earn quizzes) and a multi-level referral system.
- Automated airdrop distribution with Bull workers — batched payouts, idempotency keys and retries — plus anti-sybil checks and a points-to-ACN allocation ledger.
- Designed and deployed Solidity contracts on BNB Chain and Move modules on Aptos/Movement for the ACN token and reward claims, using Merkle-proof claims to keep gas per recipient low.
- Streamed leaderboards, notifications and claim status over WebSockets, and ran the stack on AWS (EC2, ECR, S3) with Docker and GitHub Actions.

`NestJS` `Next.js` `Solidity` `Move (Aptos)` `Web3` `Telegram Mini App` `PostgreSQL` `OpenSearch` `Bull / Redis` `WebSockets` `AWS (EC2, ECR, S3)`

BOffice · Business management suite — 07/2022 – 07/2024

boffice.bytesoft.vn

- Developed core modules for recruitment, timekeeping and library management.
- Implemented real-time updates over WebSockets and documented the API surface with Swagger.
- Managed deployment and server infrastructure with Docker, Nginx and GitLab Runner.

`NestJS` `MySQL` `Redis` `WebSockets` `React.js` `Docker` `Nginx` `Ubuntu`

Bvote · Online voting platform — 10/2022 – 12/2024

bvote.vn

- Built a secure GMS platform on the MERN stack for transparent, highly available voting sessions.
- Engineered a role-based access control system and admin modules for shareholder data and election content.
- Implemented live voting updates with Socket.io to handle concurrent users.
- Automated deployment on self-hosted servers with Docker, Nginx and GitLab Runner.

`MongoDB` `Express.js` `React.js` `Redux` `Node.js` `Socket.io` `Redis` `Docker` `Nginx`

SKILLS

Backend

Node.js | NestJS | Express | Microservices | Event-Driven | Kafka | WebSockets | Bull Queue | GraphQL | REST API | Kong Gateway

Frontend

React.js | Next.js | TypeScript | Redux | TailwindCSS | Vite | Telegram MiniApp

Blockchain

Solidity | Ethers.js | Web3.js | BNB Chain | Aptos / Movement | Smart Contracts

AI / LLM

OpenAI API | Claude API | Prompt Engineering | RAG | Embeddings | pgvector | LangChain | Tool Calling | MCP | Claude Code | Cursor

Data & Storage

PostgreSQL | MySQL | MongoDB | Oracle PL/SQL | Redis | Redis Cluster | Elasticsearch | OpenSearch

DevOps

Docker | GitHub Actions | GitLab CI | AWS (EC2, ECR, S3, CloudWatch) | Linux | Nginx | CI/CD

Languages

Vietnamese (native) | English (B1)

EDUCATION

2020 – 2025

University of Transport and Communications (UTC)

Bachelor of Information Technology

Good degree

2020 – 2022

FPT Polytechnic College

Mobile Programming

Honors degree

AWARDS

2024

Runner-up — Movement Olympus Hackathon
