ABOUT ME

Driven by the challenge of building end-to-end products, I work as a Full-Stack Engineer with experience across modern frontend, scalable backend systems, and blockchain technologies. I focus on writing clean, maintainable code while optimizing performance and system reliability. Alongside full-stack development, I actively explore blockchain, with the goal of growing into a senior role where I can combine technical depth with strategic impact.

EDUCATION

UNIVERSITY OF TRANSPORT AND COMMUNICATIONS - UTC

Bachelor of Information Technology

Good degree

SKILLS

Back-end: Node.js (NestJS, Express), Microservices, WebSockets, S3, Kafka.

Front-end: React.js, Next.js, TypeScript, Ethers.js, Web3.js, Blockchain (Solidity, Aptos).

Database: PostgreSQL, MySQL, MongoDB, Redis, Oracle, Elasticsearch.

DevOps: Docker, GitHub Actions, AWS (EC2, ECR, CloudWatch), Linux.

English: B1 English Certification.

WORK EXPERIENCE

IGB SOFT JSC | 04/2025 – Present

Backend Engineer

Migrating legacy PHP systems to Microservices architecture using NestJS, Kafka, and Redis. Optimizing API performance and system stability for a large-scale recruitment platform.

Tech stack: NestJS, PostgreSQL, Kafka, Redis (Cluster), Elasticsearch, Docker.

DATH SOLUTIONS JSC | 07/2024 – 04/2025

Fullstack & Blockchain Developer

Developed SocialFi platforms and Telegram MiniApps with real-time features.

Built and deployed Smart Contracts on BNB Chain and Aptos.

Tech stack: NestJS, Next.js, Solidity, Web3, PostgreSQL, AWS, GitHub Actions.

BYTESOFT VIETNAM JSC | 06/2022 – 07/2024

Backend Engineer

Developed business operation software (BOffice) focusing on recruitment and timekeeping modules.

Implemented RESTful APIs, GraphQL, and WebSockets for international markets.

Tech stack: NestJS, React.js, MySQL, MongoDB, Docker, CI/CD.

PROJECTS

Careerviet (Recruitment Platform) | 04/2025 – Present

Migration of a complex legacy PHP monolith to a modern NestJS Microservices architecture to improve system modularity and scalability.

Engineered an Event-Driven Architecture using Kafka and implemented the Saga Pattern to manage distributed transactions and ensure data consistency across heterogeneous databases (PostgreSQL, MongoDB, Oracle).

Optimized high-performance search capabilities by migrating from Solr to Elasticsearch and implementing multi-database synchronization.

Enhanced system resilience and traffic management by deploying Kong Gateway and utilizing Redis Cluster for high-availability distributed caching.

Tech stack: NestJS, Microservices, Kafka (Saga), Redis Cluster, Elasticsearch, PostgreSQL, MongoDB, Oracle PL/SQL, Kong Gateway, Docker.

Acanet (SocialFi & Telegram MiniApp) | 07/2024 – 04/2025

Engineered a SocialFi network and Telegram mini-app to automate and manage high-volume airdrop campaigns.

Developed and deployed Smart Contracts on BNB Chain and Aptos/Movement using Solidity. Built real-time communication features using WebSockets and managed background jobs with Bull queue to optimize token distribution.

Tech stack: NestJS, Next.js, Solidity, Web3, PostgreSQL, OpenSearch, AWS (EC2, ECR, S3).

BOffice (Business Management) | 07/2022 – 07/2024

Developed core modules for recruitment, timekeeping, and library functions for both domestic and international markets.

Implemented real-time updates using WebSockets and established a robust API documentation system with Swagger.

Managed application deployment and server infrastructure using Docker, Nginx, and GitLab Runner.

Tech stack: NestJS, MySQL, Redis, WebSockets, React.js, Docker, Nginx, Ubuntu.

Bvote (Online Voting Platform) | 10/2022 – 12/2024

Developed a secure online General Meeting of Shareholders (GMS) platform utilizing the MERN stack to ensure transparency and high availability during voting sessions.

Engineered a Robust Role-Based Access Control (RBAC) system and administrative modules for efficient shareholder data management and election content configuration.

Implemented real-time voting updates and live communication features using Socket.io and WebSockets to handle concurrent user interactions.

Managed application deployment on custom-built servers using Docker, Nginx, and GitLab Runner for automated CI/CD processes.

Tech stack: MongoDB, Express.js, React.js, Redux, Node.js, Socket.io, Redis, Docker, Nginx.

HONORS & AWARDS

- Runner-up – Movement Olympus Hackathon.
-
